Software Testing

Topic #4 – Software Test Activities

Instructor: **Jerry Gao, Ph.D., Professor**
San Jose State University

TOPIC #4 – SOFTWARE TESTING ACTIVITIES

Test Planning Activities

Test Design Activities

Test Execution Activities

Test Evaluation Activities

Test Management Activities

Software Test Planning Activities:

1 **Test Planning** ➡️ **Test Plan**

To determine test scope, risks and identify the objectives of testing

To determine the test approach.

To determine QA and testing standards, and coverage policy

To determine tasks and schedules

To determine the required resources for software testing

Software Test Design Activities:

② **Test Design** → **Test Design**

Target at software testing requirements for under-test product

To use well-defined Test methods

To design and track software tests

Understand the pre-conditions post-conditions for each test

To design and determine software test environment and infrastructures

Software Test Execution Activities:

③ Test Execution ⟹ **Test Results**

To select test strategy and test sets

To execute tests

To determine test procedure

To record test results

To automate tests using scripting

To record bugs for under-test software

Software Test Evaluation Activities:

(4) **Test Evaluation** → **Test Evaluation Report**

Bug analysis

Test analysis

Quality analysis

Cost analysis

Test review

Software Test Management Activities:

⑤ **Test Management** ⟶ **Test Management Report**

Problem Management

Schedule Management

Quality Management

Cost Management

Project Management
